Heat Recovery System

Catching heat isn't
always a bad thing.

Gruenberg's New Heat Recovery System can make heat work harder for you.

Introducing the Gruenberg Heat Recovery System. It captures the heat generated during your thermal process and allows you to reuse it during your next cycle. This lowers energy costs and improves cycle time, improving not only your bottom line, but also your time to market.

When things heat up, it's best to be prepared. Ask about the Gruenberg Heat Recovery System before purchasing your next oven.
